JBasic is a freeware, but useful program for the active Java developer. It can perform most of the automated java language tasks without resorting to a formal programming language. Some examples are: Automating test cases and generating setup and tear down scripts Generating code from source files, validating it against a list of expectations Supporting code review and bug finding tools Generating code from scripts, validating, debugging and monitoring them It is based on a Domain Specific Language, which means that it comes with a toolset to edit, validate and monitor the result of generated files. Besides, the JBasic language is easy to learn, which means that it is not as difficult to get into it as other languages. JBasic is not a "visual" programming language, so it is easy to get the concepts in your head. For this reason, it is also easier to get the hang of, even if you have no knowledge of Java. The language is based on a simple graph syntax, so it is easy to produce correct, readable and maintainable code in a fast and efficient way. Database changes from SQL Server are reflected in JBasic without any formal programming from the user. What is JBasic?
